

To achieve the dreams of customers.

TPS

Transformer Production System can be completely customized and constructed to meet the customer needs, completely different from conventional methods.

Overview

System can be constructed to fit in the customer's production line, style and space, and budget, by combining KOIKE's Cutting Machine, Carrier Device, Stocker, Software and other several options including production control system.

Feature

- Yield is improved due to the effective use of the Remnant plate processing by the Navigation System.
- Traceability achieved by clarifying the stock with Production Control System.
- Production efficiency improved by connecting the Stocker, Conveyor Line and Multiple Cutting Machines.
- Clean and safe work environment is achieved.
- Smooth and Quick Delivery Time due to effective management process.
